

### **Product Care...**

Before doing any kind of work with your glass lighting, you should ensure that the power supply is turned off to prevent injury.

- Remove the bulb before attempting to remove glass shade.
- To improve brightness, use a damp cloth and wipe bulb clean.
- Place bulb in socket once it is fully dry and glass shade has been cleaned and reassembled.

### **For Most of our Designs...**

For lasting beauty, simply wipe clean with a soft lint free cloth. No polishes, abrasives, or chemicals should ever be used.

### **Glass Globes...**

Use great care when handling your glass shade.

- We recommend a soft lint free cloth to clean the inside of your glass globe
- To remove fingerprints from the exterior, lightly dampen a soft cloth with common rubbing alcohol, and rub gently
- Never use cleaning fluid or immerse in water

### **Metal Products....**

- (Need to know what type of materials, coatings etc.)

### **Assembly Instructions....** (Do you want online or hard copy?)

We take pride in producing the most user-friendly instructions for all our products. Detailed instructions for your custom design can be found on our individual style link (maybe we can have this at the top of our page?). Full size, easy to read print and amply illustrated instructions are included with each product and available online or in a PDF.

### **OR**

We take pride in producing the most user-friendly instructions for all our products. Detailed instructions for your custom design can be found in our enclosed Product Care guide. Full size, easy to read print and amply illustrated instructions are included with each product.
