Signature Mix

***NOTES:**

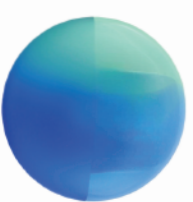

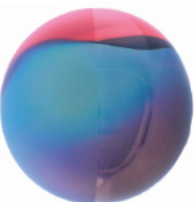

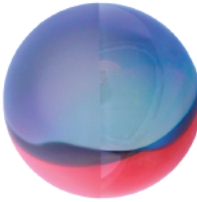

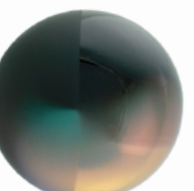

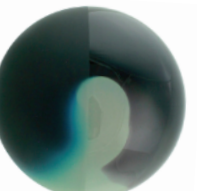

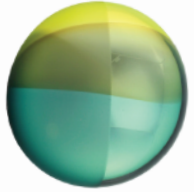

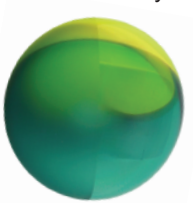

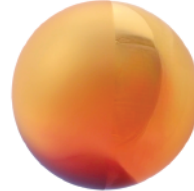

We have curated select glass colours from our suppliers to be able to offer the widest range of options. Our selection of Opal and Opaque colours are limited to neutral tones.

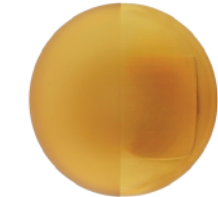

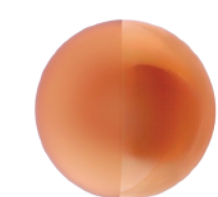

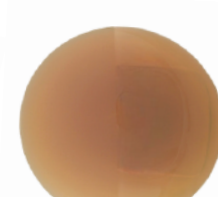

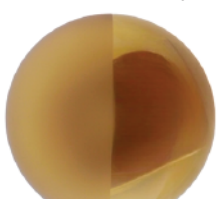

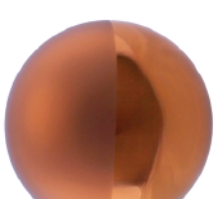

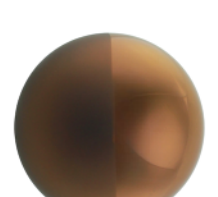

Glass thickness can affect colour saturation, and glass finish can change tone and density. Most colours can be made into our Pearl or Mirrored finish.

Coloured glass is made by melting various minerals and elements into the glass, although we can colour match on request, hand blown glass is like a living material and variations are part of the process.

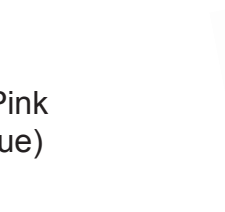

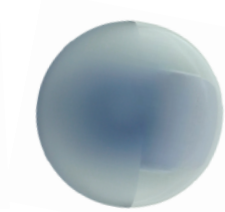

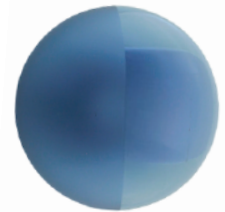

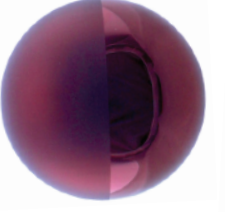

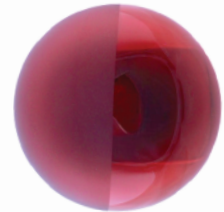

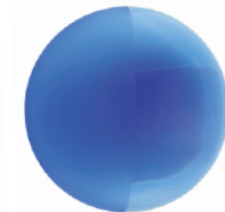

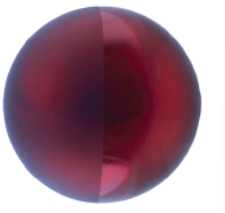

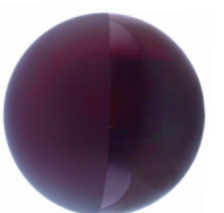

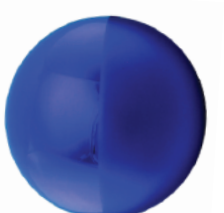

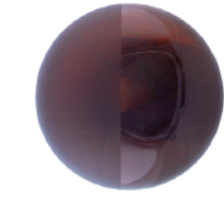

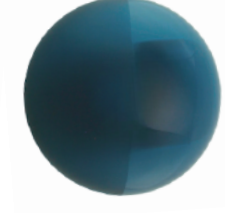

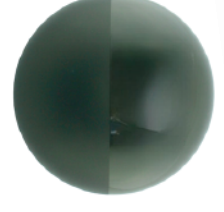

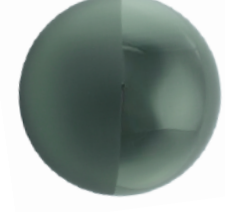

We have blown and photographed each colour sphere, however the physical sample may appear different than what is shown on a computer screen or print out.

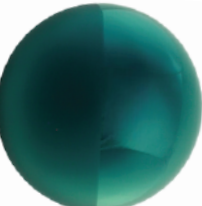

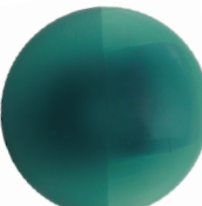

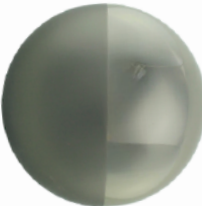

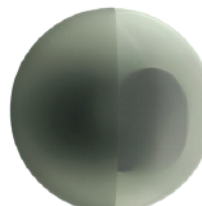

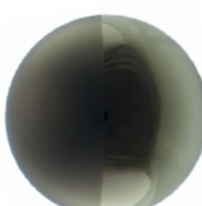

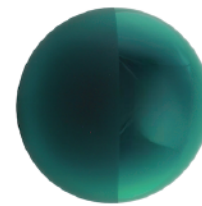

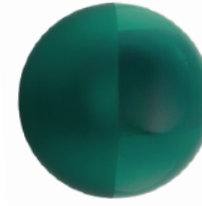

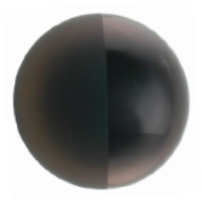

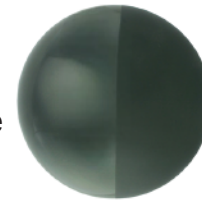

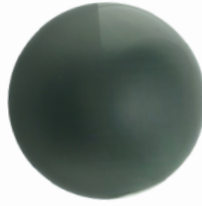

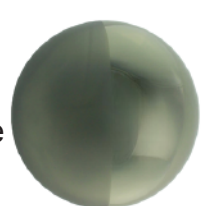

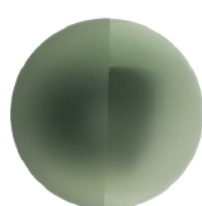

Samples can be requested for a small fee by contacting the studio.
